DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to insect detection using thermal scan, classified in class 374, subclass 5.
- II. Claims 14-19 and 26-32, drawn to an acoustic sensor, classified in class 73, subclass 587.
- III. Claims 20-33, drawn to insect detection using laser Doppler vibrometer, classified in class 73, subclass 12.01.
- IV. Claims 24, 25, 33 and 34, drawn to modifying insect behavior by providing acoustic stimulation, classified in class 73, subclass 587.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I is utilizing the thermal scan to detect insect as a whole and does not require other sensor or method for sensing insect. The subcombination has separate utility such as an acoustic sensor, a laser Doppler vibrometer, and the method of modifying the insect behavior.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
